Correction for 'Reliable high work-function molybdenum dioxide synthesis *via* template-effect-utilizing atomic layer deposition for next-generation electrode applications' by Ye Won Kim *et al.*, *J. Mater. Chem. C*, 2022, <https://doi.org/10.1039/d2tc02104h>.

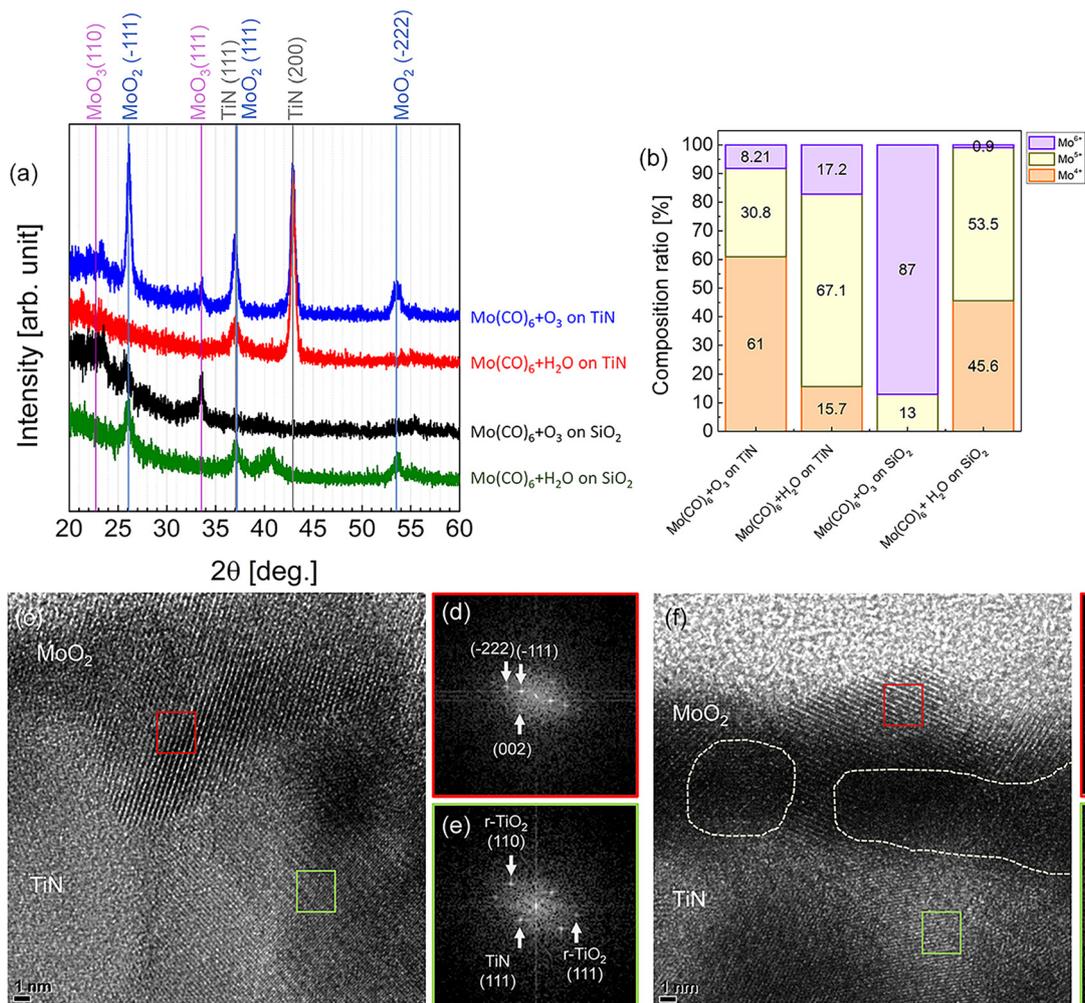

The authors regret that an incorrect version of Fig. 1(b) appeared in the published article. The corrected version of Fig. 1 and its caption are reproduced here.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.

**Fig. 1** (a) XRD patterns and (b) composition ratio of oxidation states of MoO<sub>x</sub> thin films deposited under various conditions. (c) HR-TEM image of TiN/MoO<sub>x</sub> deposited using O<sub>3</sub> and FFT patterns of (d) MoO<sub>2</sub> (indicated by red box in (c)) and (e) TiN surface (indicated by green box in (c)). (-111), (111), and (-222) in (d) indicate the planes of monoclinic phase MoO<sub>2</sub>. r-TiO<sub>2</sub> in (e) indicates rutile-phased TiO<sub>2</sub>. (f) HR-TEM image of TiN/MoO<sub>x</sub> deposited using H<sub>2</sub>O. The dashed line region indicates an amorphous area in the film. FFT patterns of (g) MoO<sub>2</sub> (indicated by red box in (f)) and (h) the TiN surface (indicated by the green box in (f)).
