Correction for 'Discovering atomistic pathways for supply of metal atoms from methyl-based precursors to graphene surface' by Davide G. Sangiovanni et al., *Phys. Chem. Chem. Phys.*, 2023, 25, 829–837, <https://doi.org/10.1039/D2CP04091C>.

The published article contains typographical errors in the caption for Fig. 5 and the positions of the Fig. 7 and 9 images are reversed.

(1) The correct caption for Fig. 5 should read as written below:

"Fig 5 (Simulation#2) Trimethylindium ( $(\text{CH}_3)_3\text{In}$ ) reaction activated by collision with a  $\text{H}_2$  molecule."

(2) The position of the Fig. 7 image should be swapped with that of the Fig. 9 image and the correct figures are shown below.

Fig. 7 (Simulation#2) Formation of methane and  $\text{H}_2\text{C}=\text{InCH}_3$  due to methyl-In reaction with ethane.

Fig. 9 (Simulation#2) Interpretation of reactions between a  $\text{CH}_2$  radical adsorbed on graphene and a  $\text{H}_2\text{C}=\text{InH}$  gas molecule leading to the formation of  $\text{InH}$ .

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
