Highlighting research from the International Research Project -*Deformation, Flow and Fracture of Disordered Materials* (CNRS, D-FFRACT), between France and Norway, led by Stéphane Santucci (Laboratoire de Physique, CNRS / ENS de Lyon), and Knut Jørgen Måløy (PoreLab, University of Oslo).

Capillary washboarding during slow drainage of a frictional fluid

The bulldozing of an immersed sedimented granular bed in a capillary tube by an air/liquid meniscus can lead to the formation of dunes and clogging granular plugs, while slowly draining out the liquid.
