Correction: Tobramycin-mediated self-assembly of DNA nanostructures for targeted treatment of *Pseudomonas aeruginosa*-infected lung inflammation

Yuhang Xu,[a] Qian Liu,[a,b] Bin Wang,[a,c] Quan Li,[a] Yue Chen,[a] Yao Yang,[a] Zhihao Zhu,[a] Daohui Gong,[a] Chuan Zhang,*[d] Guansong Wang*[a,c] and Hang Qian*[a,c]

Correction for 'Tobramycin-mediated self-assembly of DNA nanostructures for targeted treatment of *Pseudomonas aeruginosa*-infected lung inflammation' by Yuhang Xu *et al.*, *Biomater. Sci.*, 2024, **12**, 2331–2340, https://doi.org/10.1039/D3BM02121A.

The authors regret that an incorrect version of Fig. 3 was included in the original article. The correct version of Fig. 3 is presented below. The authors note that the correction does not change the conclusions of the paper.

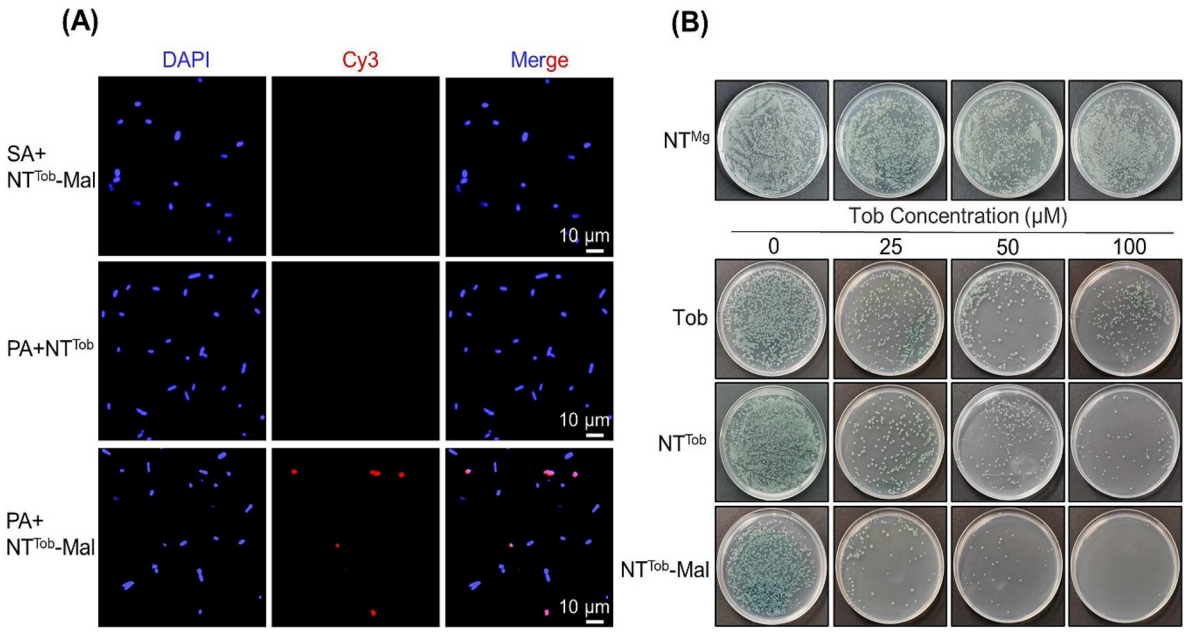

Fig. 3 *In vitro* antibacterial evaluation of the NT^{Tob}-Mal. (A) CLSM imaging of PA after incubation with NT^{Tob}-Mal. *Staphylococcus aureus* (SA) and NT^{Tob}-Mal group, PA and NT^{Tob} group served as control entities. The concentration of Tob was 200 μg mL^{-1}, and that of maleimide was 100 μg mL^{-1}. NT^{Tob}-Mal and NT^{Tob} were labeled with Cy3 dye, and DAPI was used for bacterial staining. Scale: 10 μm. (B) Antibacterial activity was determined by the plate meter methodology. PA was exposed to Tob/NT^{Tob}/NT^{Tob}-Mal for 1 h, and the samples were impregnated on agarose plates and propagated at 37 °C for 24 h. NT^{Mg} was used as the control group.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
