Correction for 'Malachite green: a long-buried water-soluble AIEgen with near-infrared fluorescence for living cell nucleus staining' by Yuan Luo *et al.*, *Chem. Commun.*, 2024, 60, 1452–1455, <https://doi.org/10.1039/D3CC05535C>.

The authors regret that Fig. 3 was incorrect in the original article. The **MG** images in row A (nucleus) and row C (mitochondria) in this figure were swapped in error. The correct Fig. 3 is as shown below. This does not affect the conclusions of the article.

**Fig. 3** Confocal microscopy images of **MG** (25  $\mu$ M) ( $\lambda_{\text{ex}}$  = 638 nm,  $\lambda_{\text{em}}$  = 650–850 nm) and various trackers incubated with HeLa cells. Images of subcellular colocalization: (A) Hoechst ( $\lambda_{\text{ex}}$  = 405 nm,  $\lambda_{\text{em}}$  = 420–500 nm). (B) LysoTracker Green ( $\lambda_{\text{ex}}$  = 488 nm,  $\lambda_{\text{em}}$  = 500–560 nm). (C) MitoTracker Green ( $\lambda_{\text{ex}}$  = 488 nm,  $\lambda_{\text{em}}$  = 500–560 nm). Scale bar = 10  $\mu$ m.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
