Fig. 2 Effects of TW-7 on learning and memory impairment in HFD/STZ-induced T2DM mice. (A) Place navigation trial ($n = 10$ mice): (a) representative search traces of mice to the target; (b) escape latency; (c) movement distance; (d) effective area movement time; and (e) effective area movement distance. (B) Spatial probe trial ($n = 10$ mice): (a) mice swimming patterns among different groups; (b) times of crossing platform; (c) escape platform detention time; (d) effective area movement time; and (e) effective area movement distance. Metformin (200 mg kg^{-1}) was used as the positive control. Different letter indicates significant statistical differences ($p < 0.05$).

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
