Correction: Harnessing an emissive guanine surrogate to design small-molecule fluorescent chemosensors of O^6-methylguanine-DNA-methyltransferase (MGMT)

Alexandra Fillion,[a,b] Jaime Franco Pinto [a,b] and Anton Granzhan *[a,b]

DOI: 10.1039/d4ob90072c

rsc.li/obc

Correction for 'Harnessing an emissive guanine surrogate to design small-molecule fluorescent chemosensors of O^6-methylguanine-DNA-methyltransferase (MGMT)' by Alexandra Fillion *et al.*, *Org. Biomol. Chem.*, 2022, **20**, 1888–1892, https://doi.org/10.1039/D2OB00208F.

The authors regret that there were some errors in Table 1. The correct table is shown below.

Table 1 Photophysical data for O^6-substituted $^{th}G_N$ derivatives in water[a]

Compound	$\lambda_{abs,max}$/nm	ε/cm^{-1} M^{-1}	$\lambda_{em,max}$[b]/nm	Φ[c]
$^{th}G_N$	315	3100	436	0.59[d]
$^{th}G_{Et}$	337	3140	448	0.47
$^{th}G_B$	339	3240	449	0.28
$^{th}G_{th}$	338	2720	446	0.11
$^{th}G_I$	332	3540	448	0.13

[a] c = 50 μM for absorbance, 5 μM for fluorescence measurements. [b] λ_{ex} = 325 nm. [c] Fluorescence quantum yield, reference: quinine sulphate in 0.5 M H_2SO_4 (Φ = 0.546). [d] This value is higher than the one reported in the literature (0.46)[28] presumably due to the use of another quantum yield standard.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
