## Expression of concern: An efficient one pot three-component nanocatalyzed synthesis of spiroheterocycles using $\text{TiO}_2$ nanoparticles as a heterogeneous catalyst

Yogesh Kumar Tailor,<sup>a</sup> Sarita Khandelwal,<sup>a</sup> Yogita Kumari,<sup>b</sup> Kamlendra Awasthi<sup>b</sup> and Mahendra Kumar<sup>\*a</sup>

Expression of concern for 'An efficient one pot three-component nanocatalyzed synthesis of spiroheterocycles using  $\text{TiO}_2$  nanoparticles as a heterogeneous catalyst' by Yogesh Kumar Tailor *et al.*, *RSC Adv.*, 2015, **5**, 46415–46422, <https://doi.org/10.1039/C5RA04863J>.

In the original article, the authors recognise concerns with the integration values in the  $^1\text{H}$  NMR spectra for compounds **4e**, **4j**, **4l**, **4n**, **5e**, **5j**, **5l**, **5m** and **5n**. The integration values for these compounds do not match the reported structures. This is currently under consideration, but in its current form, the  $^1\text{H}$  NMR data for these compounds should not be considered to be correct.

An update will be provided as soon as possible.
