 Expression of concern for 'An efficient one pot three-component nanocatalyzed synthesis of spiroheterocycles using TiO<sub>2</sub> nanoparticles as a heterogeneous catalyst' by Yogesh Kumar Tailor *et al.*, *RSC Adv.*, 2015, 5, 46415–46422, <https://doi.org/10.1039/C5RA04863J>.

In the original article, the authors recognise concerns with the integration values in the <sup>1</sup>H NMR spectra for compounds **4e**, **4j**, **4l**, **4n**, **5e**, **5j**, **5l**, **5m** and **5n**. The integration values for these compounds do not match the reported structures. This is currently under consideration, but in its current form, the <sup>1</sup>H NMR data for these compounds should not be considered to be correct.

An update will be provided as soon as possible.

Dr Laura Fisher
