**Fig. 6** Intravenous Mito-Ru MOF injection 30 min after intra-TMJ CFA injection downregulated the TNF $\alpha$ /NF- $\kappa$ B/Neat1 pathways in a mouse TMD pain model. (A) Single i.v. Mito-Ru MOF injection 30 min after intra-TMJ CFA injection downregulated Neat1 in Sp5C in mouse TMD pain model after 3 d; \*\* $P$  < 0.01; \*\*\* $P$  < 0.0001, two-way ANOVA,  $N$  = 18. (B) Single i.v. Mito-Ru MOF injection 30 min after TMJ CFA injection downregulated p-p65 in Sp5C in mouse TMD pain model after 3 d; \*\*\* $P$  < 0.0001 vs. CFA + vehicle; two-way ANOVA,  $N$  = 39. (C) Single i.v. Mito-Ru MOF injection 30 min after TMJ CFA/saline injection did not alter p65 expression in Sp5C after 3 d; ns $P$  > 0.05,  $N$  = 27. (D) Single i.v. Mito-Ru MOF injection 30 min after TMJ CFA injection counteracted the increase in p-p65 immunofluorescence intensity in Sp5C in mouse TMD pain model after 3 d (scale bar = 400  $\mu$ m). (E) Statistical analysis of data in (D) \*\*\* $P$  < 0.0001 vs. CFA + vehicle group,  $N$  = 3, two-way ANOVA. (F) Intra-Sp5C NF- $\kappa$ B injection in downregulated Neat1 in naive mice; \*\* $P$  < 0.01 vs. Scramble control,  $N$  = 5;  $t$ -test. (G) Single i.v. Mito-Ru MOF injection 30 min after intra-TMJ CFA injection downregulated TNF $\alpha$  in Sp5C in mouse TMD pain model after 3 d; \*\*\* $P$  < 0.001 vs. CFA + vehicle,  $N$  = 4; two-way ANOVA.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
