Correction for 'Novel single component tri-rare-earth emitting MOF for warm white light LEDs' by Hui Li et al., Dalton Trans., 2018, 47, 8427–8433, https://doi.org/10.1039/C8DT01477A.

The authors regret an error in the original CIF file for Tb-MOF. Due to the confusion between Tb-MOF's and Dy-MOF's original files during the refinement, some of the data of the two is consistent. The structure of Tb-MOF was reanalysed using the original sample, and the results are consistent with the published data as shown in Fig. 1. The coordination mode of Tb-MOF is exactly the same as in the original article, except there is an additional water molecule. The CIF file of Tb-MOF has been updated and the number remains 1555476.

An independent expert has viewed the new raw data and confirmed that it is consistent with the discussions and conclusions presented.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
