Featuring work from the Master Wei Jin from the Faculty of Environmental Science and Engineering, Kunming University of Science and Technology and Kunming Ecological Environmental Engineering Assessment Center, China.

Localized regional environmental risk in mountainous urban areas of Southwest China: identification, assessment, and management strategies in Kunming

Focusing on Kunming, a western plateau mountain city, aims to identify distributions of environmental risk sources and environmental risk receptors, combining administrative region and gridded environmental risk analysis methods, proposing a list of key risk sources, and proposing suggestions for managing unexpected incidents.
