## Retraction: Silver doped reduced graphene oxide as a promising plasmonic photocatalyst for oxidative coupling of benzylamines under visible light irradiation

Anurag Kumar,<sup>ab</sup> Aathira M. Sadanandhan<sup>a</sup> and Suman L. Jain<sup>\*a</sup>

Retraction of 'Silver doped reduced graphene oxide as a promising plasmonic photocatalyst for oxidative coupling of benzylamines under visible light irradiation' by Anurag Kumar *et al.*, *New J. Chem.*, 2019, **43**, 9116–9122, <https://doi.org/10.1039/C9NJ00852G>.

The Royal Society of Chemistry hereby wholly retracts this *New Journal of Chemistry* article due to concerns with the reliability of the NMR spectra reported in the supplementary information.

There are inconsistencies in the appearance of the NMR spectrum in Fig. S13 indicating that it may have been inappropriately edited. The authors are unable to provide the raw NMR data for any of the published NMR spectra.

Given the significance of the concerns regarding the integrity of the NMR data, the findings presented in this paper are no longer reliable.

All authors were informed about the retraction. Suman L. Jain accepts the decision to retract. The other authors did not respond.

Signed: Sally Howells-Wyllie, Executive Editor, *New Journal of Chemistry*
