Correction: Designing a multifaceted bio-interface nanofiber tissue-engineered tubular scaffold graft to promote neo-vascularization for urethral regeneration

Yuqing Niu,^{abc} Guochang Liu,^d Ming Fu,^d Chuangbi Chen,^b Wen Fu,^d Zhao Zhang,^d Huimin Xia^{*ac} and Florian J. Stadler^{*b}

DOI: 10.1039/d5tb90064f

rsc.li/materials-b

Correction for 'Designing a multifaceted bio-interface nanofiber tissue-engineered tubular scaffold graft to promote neo-vascularization for urethral regeneration' by Yuqing Niu *et al.*, *J. Mater. Chem. B*, 2020, 8, 1748–1758, <https://doi.org/10.1039/C9TB01915D>.

The authors regret that the methodology for measuring the average diameter of the neo-urethra was omitted from the Histological assessment section in the Experimental. The sentences below should be read as the fourth, fifth and sixth sentences of the Histological assessment section, after the sentence starting “Each neo-urethra tissue was embedded in paraffin. . .”.

“Furthermore, the average diameter of the neo-urethra was analyzed using CaseViewer (version 2.4.0.119028). Within CaseViewer, manual annotations were employed to measure the diameter of the neo-urethra, ensuring accurate and consistent assessments across samples. These measurements were then used to generate the data presented in Fig. 3b.”

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
