Retraction of 'Biocompatible dextran-coated gadolinium-doped cerium oxide nanoparticles as MRI contrast agents with high T_1 relaxivity and selective cytotoxicity to cancer cells' by A. L. Popov *et al.*, *J. Mater. Chem. B*, 2021, 9, 6586–6599, <https://doi.org/10.1039/D1TB01147B>.

The Royal Society of Chemistry, with the agreement of the authors, hereby wholly retracts this *Journal of Materials Chemistry B* article due to concerns with the reliability of the data.

In the TEM data in Fig. 1b there is an unexpected repeating pattern.

In Fig. 5a the 5 panels for hMSc control to 5 mg mL⁻¹ are identical to the panels for 24 h control, 0.6 mg mL⁻¹ to 5 mg mL⁻¹ of sample 1 in Fig. 5 of ref. 1.

In Fig. 6a the 4 panels for hMSc control to 2.5 mg mL⁻¹ are identical to the panels for 24 h control, 0.6 mg mL⁻¹ to 2.5 mg mL⁻¹ of sample 1 in Fig. 6 of ref. 1.

In Fig. 6a the panel for MCF-7 control has partial overlap with the panel for MCF-7 5 mg mL⁻¹.

Given the significance of these concerns, the findings presented in this paper are no longer reliable.
