Correction: The thermodynamics of endosomal escape and DNA release from lipoplexes

Yotam Y. Avital,[ab] Niels Grønbech-Jensen[cd] and Oded Farago*[ab]

Correction for 'The thermodynamics of endosomal escape and DNA release from lipoplexes' by Yotam Y. Avital *et al.*, *Phys. Chem. Chem. Phys.*, 2016, **18**, 2591–2596.

The authors would like to correct an error in the published Fig. 2B, where the data for surfaces numbers 1 and 4 need to be interchanged. The amended figure and caption are shown below:

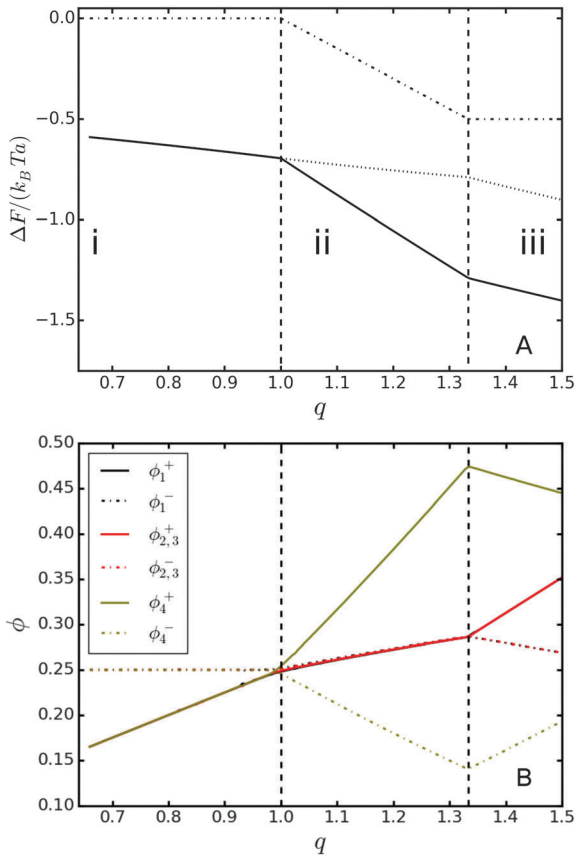

Fig. 2 (A) Solid line – the free energy ΔF (see text for definition), as a function of $q = 2\Phi_+/\Phi_D$ with $\Phi_D = 1$ and $\Phi_- = 0.5$. Dot-dashed and dotted lines show the partial contributions to ΔF originating, respectively, from counterion release and lipid mixing. (B) The equilibrium distribution of CLs (solid lines) and ALs (dot-dashed lines) in monolayers $i = 1$ (black), $i = 2, 3$ (red) and $i = 4$ (yellow). The vertical dashed lines mark the transition points between the different regimes discussed in the text.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
