rsc.li/materials-aCorrection for 'Plasmonic Au nanoclusters dispersed in nitrogen-doped graphene as a robust photocatalyst for light-to-hydrogen conversion' by Dung Van Dao et al., *J. Mater. Chem. A*, 2021, DOI: 10.1039/D1TA05445G.

The authors would like to replace Fig. 1a with the corrected version, as shown below.

Fig. 1 (a) Schematic illustration of the preparation procedure for Au NCs/N-Gr nanocomposites. (b) Aberration-corrected HAADF-STEM observation for the as-pyrolyzed Au NCs/N-Gr (the inset provides the SAED pattern). (c) High-resolution TEM image shows the layer-to-layer N-Gr distance. (d) Aberration-corrected HAADF-STEM image for Au NCs/N-Gr (the white dots indicate the Au nanoclusters). (e) Corresponding EDS elemental maps of C (yellow), N (pink), and Au (red) elements present in (d). (f) EDS spectrum for Au NCs/N-Gr nanocomposites; the inset shows the atomic composition of C, N, and Au elements in the area shown in (c). (g) XRD patterns of the as-pyrolyzed free N-Gr and Au NCs/N-Gr nanocomposites.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
